**Amendments to the Claims:**

The listing of claims will replace all prior versions and listings of claims in the application:

**Listing of Claims:**

- 5     1 (currently amended): A method for controlling a computing device with a security device wherein a first identification information is stored in said computing device and a second identification information is stored in said security device, said first identification information comprising primary administrative first identification information and secondary regular first identification information, said computing
- 10     device further comprising a BIOS program and an operation system program, said method comprising the steps of:
- executing said BIOS program of said computer system;
- fetching said first identification information and said second identification information;
- 15     comparing said primary administrative first identification information with said second identification information;
- querying whether to update said first identification information in response to said second identification information matching said primary administrative first identification information;
- 20     comparing said secondary regular first identification information with said second identification information; and
- skipping querying whether to update said first identification information, and executing said operation system program directly in response to said second identification information matching said secondary regular first identification
- 25     information.
- 2 (original): The method of claim 1 in which said second identification information does not match said first identification information, further comprising the step of turning off said computing device.

30

Appl. No. 10/710,927  
Reply to Office action of November 28, 2007

3 (original): The method of claim 1 in which said second identification information does not match said first identification information, further comprising the steps of:

5 querying whether to turn off said computing device or to fetch said second identification information again;  
fetching said second identification information from said security device; and  
comparing said second identification information with said first identification information.

10 4-18 (cancelled)

19 (currently amended): A computing system comprising :

an administrator security device having a ~~primary~~ administrative second identification information stored therein;  
15 a computing device having a plurality of first identification information, a BIOS program and an operation system program stored therein, wherein said plurality of first identification information comprises a ~~primary~~ administrative first identification information and a ~~secondary~~ regular first identification information, said computing device executing said BIOS  
20 program, fetching said ~~primary~~ administrative second identification information from said administrator security device, comparing said ~~primary~~ administrative second identification information with said plurality of first identification information, and determining that said ~~primary~~ administrative second identification information matches said ~~primary~~ administrative first  
25 identification information, and querying whether to update said first identification information or not; and  
a user security device having a ~~secondary~~ regular second identification information stored therein,  
wherein if said computing device is instructed to update said first identification  
30 information, said computing device fetches said ~~secondary~~ regular second

identification information from said user security device and updates said first identification information to match said ~~secondary~~ regular second identification information.

5 20 (currently amended): The computing system of claim 19, wherein said computing device updates said ~~primary~~ administrative first identification information to match said ~~secondary~~ regular second identification information.

10 21 (currently amended): The computing system of claim 19, wherein said computing device updates said ~~secondary~~ regular first identification information to match said ~~secondary~~ regular second identification information.

15 22 (original): The computing system of claim 19, wherein updating said first identification information is executed by said BIOS program.

23 (original): The computing system of claim 19, wherein updating said first identification information is executed by said operation system program.
